Palletizing Monitors

RECYCLE **TOTAL RECLAIM** REDUCE REUSE

PACKAGING GUIDE

1 Begin placing computer monitors on a pallet. Start with one on each corner and one in the middle, all positioned facedown.

2 Next, place monitors face up between face down monitors.

3 The curves in the monitors should allow them to fit together snugly.

4 Start the second layer, placing the monitors the same way as the first layer.

5 Use shrink wrap to secure the load. Pull the shrink wrap tight as you go around the corners and wrap at least 5 times around..

6 80-gauge shrink wrap works well for wrapping computer towers. Give the material a push to ensure it is wrapped securely and is stable. Continue wrapping if needed.
